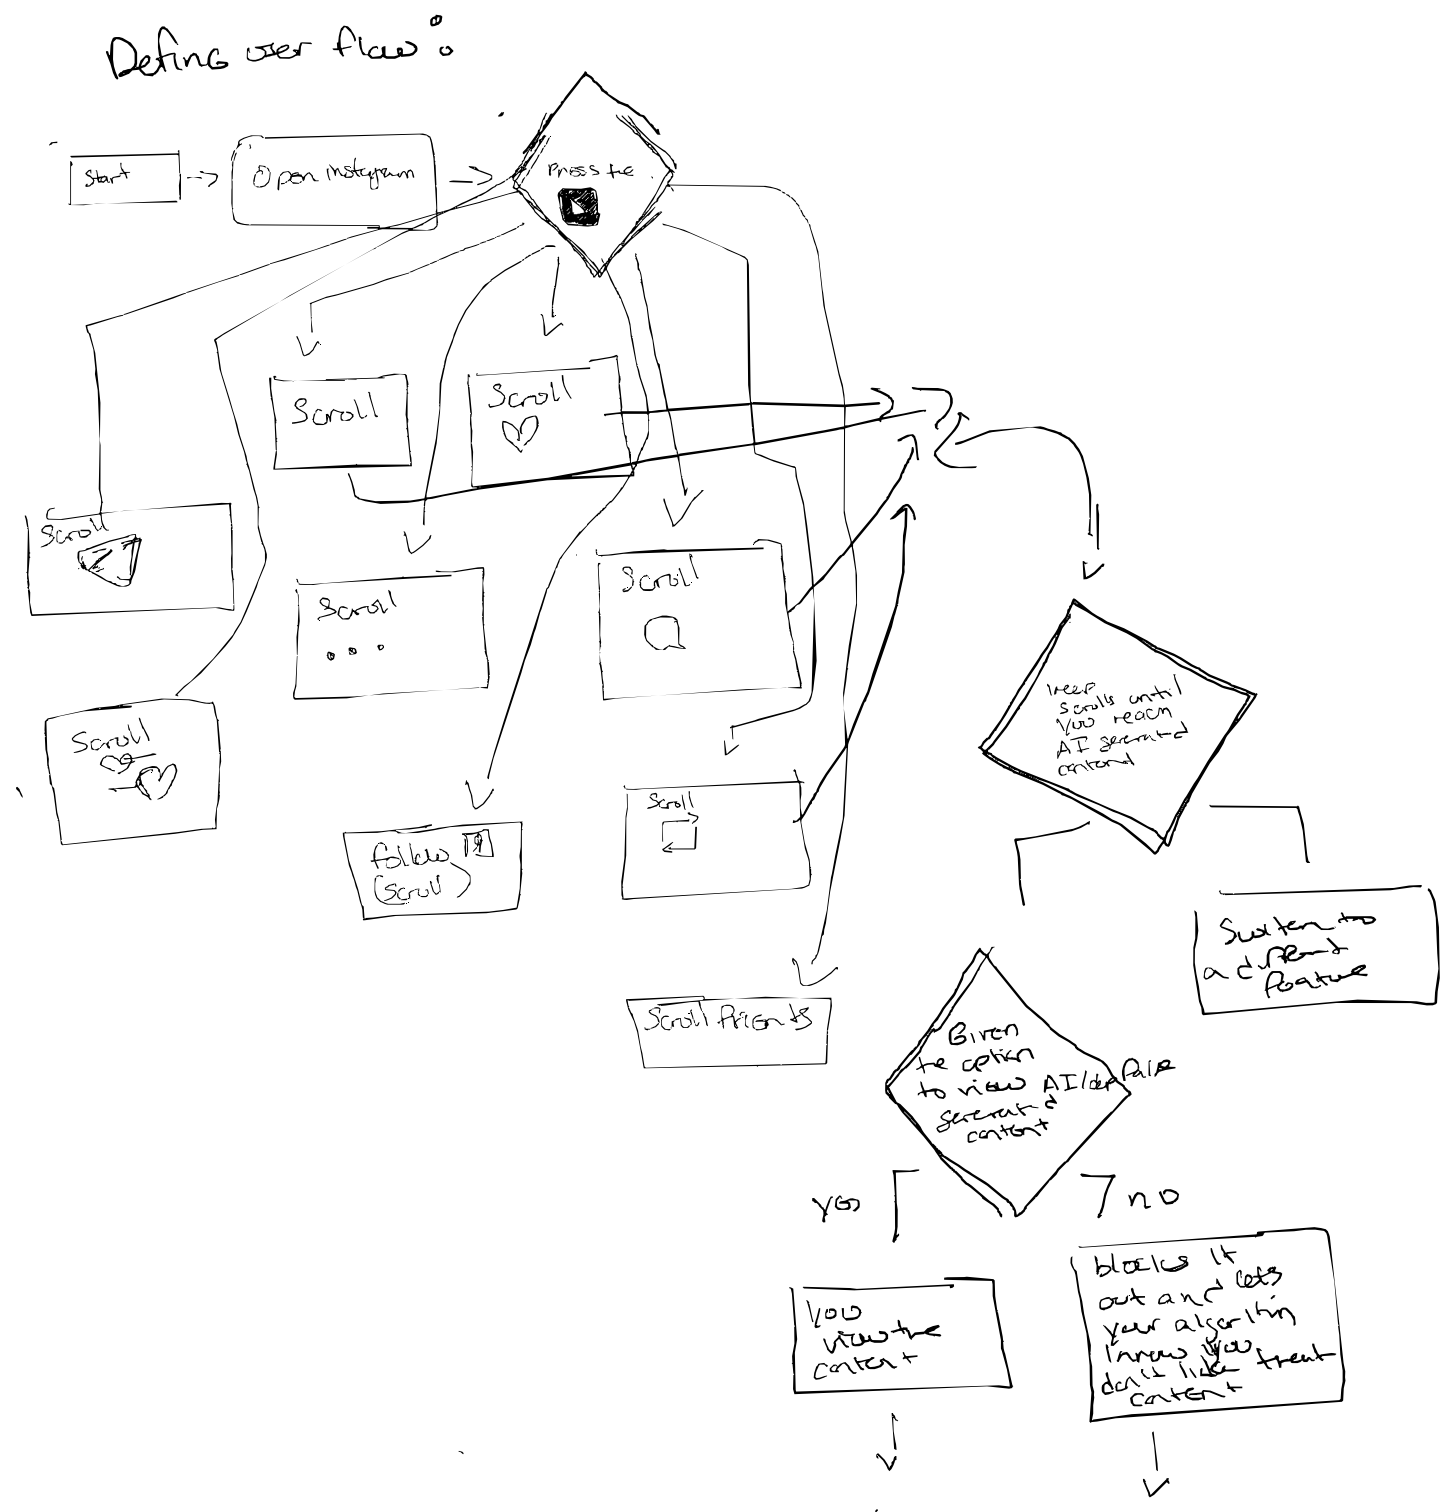
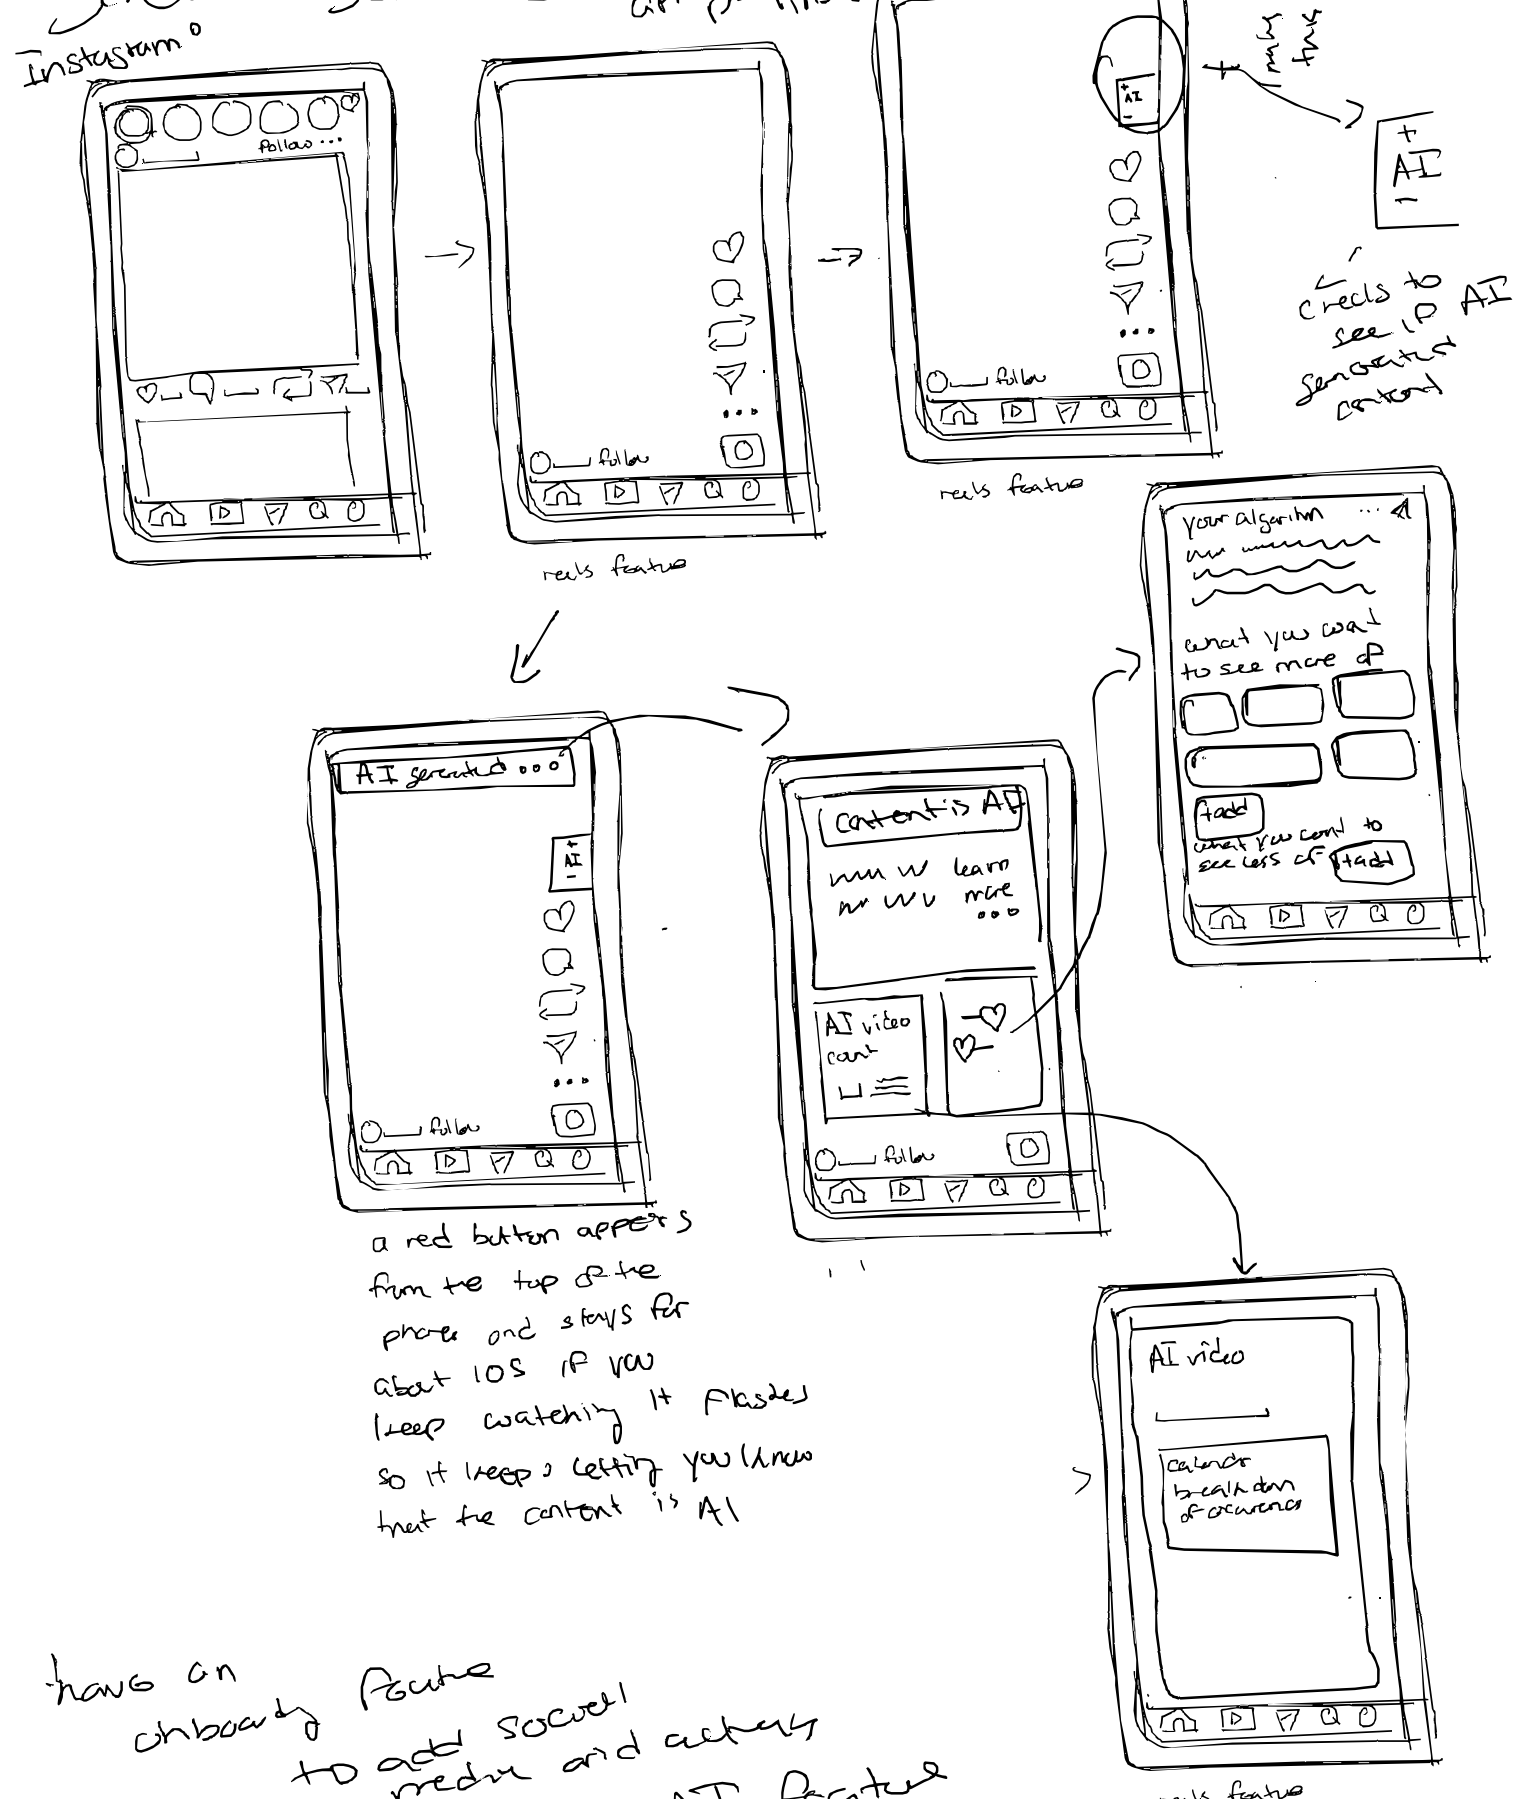
Defing user flow:

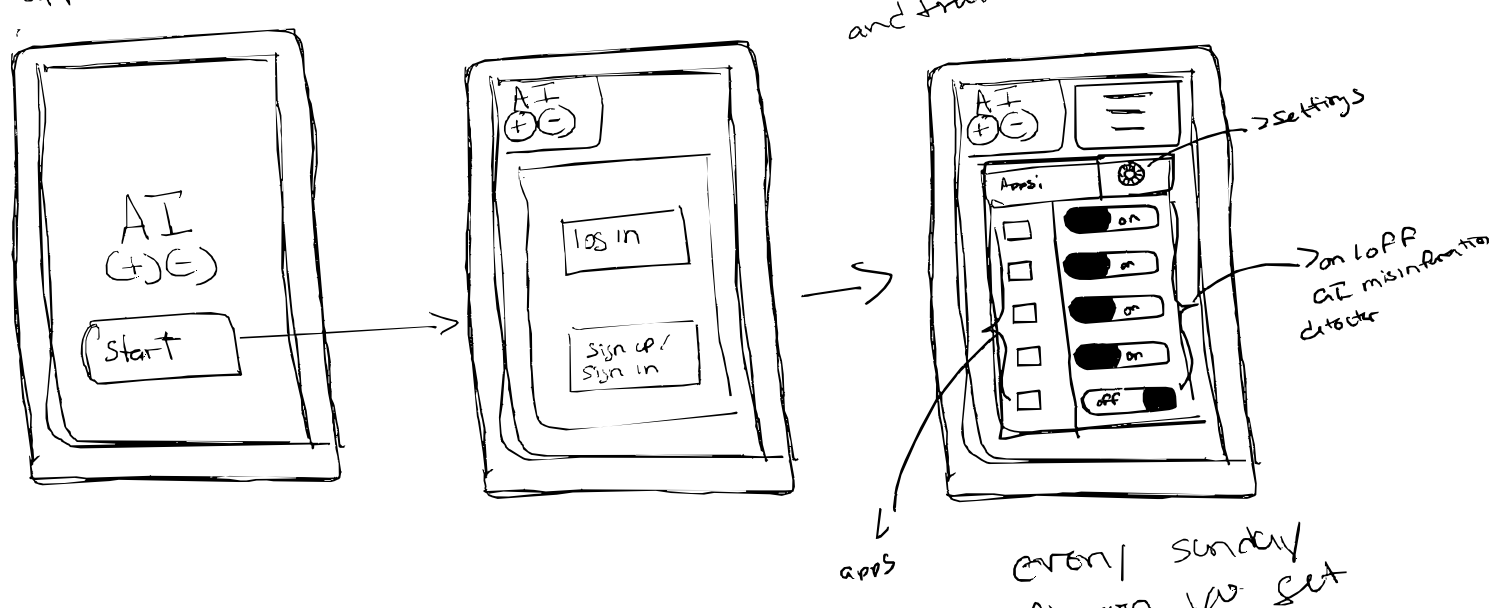


Sketch screens of the app in play on instagram:



have an onboarding feature to add social media and activate the + or (-) AI feature

actually app: This app allows you to track the amount of AI misinformation you come across your phone across your app ecosystem and track across all your apps



apps

every sunday afternoon you get a notification of your AI misinformation you come across with detailed analytics and you get to see other people's scores either by sharing or directly inside the app

Also in the app I want to create some checks like badges you earn for least amount of AI misinformation consume

If you reach your limit the app lets you know so you refresh

this app keep you informed

there are those who are informed and those who are misinformed

If you are informed you have a very low AI misinformation detection score

If you are misinformed you have a high AI misinformation detection score

Judge (lawyer)

state the facts

don't judge you through your actions

AI plus minus is stating the facts and isn't judging you but now makes you feel like a criminal

We make an ecosystem that tracks everytime you interact with AI generated content for people who use social media.

We help people (voters) who are on social media and trying to contact about the news and let them know if something is AI or not

we want to create a system that identifies AI gen content and let the user directly see how they can change it so voters can be responsibly informed

have some kind of social feature so you know you are and your friends are informed whereas everyone else
